Our experts understand that every face's anatomy is unique and requires bespoke attention and care. Rest assured that you will receive nothing short of the very best face-shaping services.

Treat Your Skin To Perfection

It's Time To Turn Back The Clock With Studio Nude's Injectable Treatments.

Knowing Your Types Of Injectable Treatments

These two injectable treatments have become the go-to beauty procedures:

Botox Treatment

Botox injections are the most popular injectable treatments used worldwide to eliminate visible signs of aging. They contain a neurotoxin known as botulinum toxin type A that blocks nerve

impulses to facial muscles, making them relax and smoothing wrinkles on different parts of the face via squinting, laughing, and other facial expressions.

You can now achieve a youthful and exquisite appearance by improving your facial anatomy through Botox injections. Here is what you can expect:

- Treat facial wrinkles, smile lines, frown lines, dynamic lines, vertical lines, marionette lines, and crow's feet
- Smoothen facial wrinkles
- Prevent excessive sweating (hyperhidrosis) in the underarms
- Treat chronic migraine
- Treat crossed eyes (strabismus)
- Prevent excessive muscle contractions (dystonia)
- No more cervical dystonia
- Get rid of eyelid twitching
- Cure pediatric upper limb spasticity
- Treatment for adult spasticity
- Treat blepharospasm

Nevertheless, due to the procedure's sensitivity, it is vital to opt for experts from credible platforms like Studio Nude to get your regular Botox treatments.

Wrinkles? A Thing Of The Past Now With Injectable Treatments!

Dermal Filler Treatment

Dermal fillers are another beauty rejuvenating injectable treatment used widely to bring back lost facial volume, smoothen lines, and enhance facial contours. This effective treatment uses injections containing different chemical compounds. A common substance used in dermal fillers is hyaluronic acid, a naturally occurring compound in the human body.

Hyaluronic acid keeps the skin plump and hydrated for a fresh, youthful, and flawless appearance. Other substances present in dermal filler injections include Calcium Hydroxylapatite (CaHA), Poly-L-lactic Acid, fat injections, and Polymethylmethacrylate (PMMA).

Dermal fillers are an exceptional injectable filler treatment to give your face a smooth, flawless, and fresh look. Here are the results you can get with a dermal filler treatment:

- Facial contours
- Smoothened vertical lip lines
- Enhance and restore volume to sunken cheeks or temples
- Plumped lips
- A smoothed-out chin crease
- Improved symmetry among facial features
- Reduced signs of aging

Aging Is No More a Reason To Compromise On Your Natural Beauty Standards

What's The Hype Around Injectable Treatments?

Injectable treatments have recently become the talk of the town due to their benefits for people of different ages, including:

- A cost-effective and non-surgical procedure to obtain the desired facial appearance
- Injectable treatments are a permanent solution to prevent aging, making you appear young and charming
- Injectable wrinkle relaxers make your skin appear smooth, tight, and flawless, preserving your youthfulness
- Chemicals used in injectable treatments are readily available worldwide, making this procedure highly accessible and affordable for the masses
- Botox treatments and dermal fillers deliver natural-looking results

Frequently Asked Questions

1. What are the side effects of getting Botox injections?

Like other procedures, you may feel some temporary side effects after a Botox injection, including:

- Dry corners of the mouth
- Muscle spasms or twitching
- Numbness
- Neck pain
- Fatigue
- Droopy eyelids

- Injection site headache
- Migration of the substance

2. Should you consider any medical issues before getting dermal fillers?

Before getting any procedure, get yourself thoroughly examined to ensure you are fit for it. It would be better to avoid dermal fillers if you have specific medical issues, as there is a risk of an allergic reaction breakout.

3. Are injectable reactions painful?

Injectable reactions are not painful. However, you may notice slight bruising on the injection site after filler injections. You can apply a topical anesthetic cream to induce a numbing effect so you do not feel pain.

4. How long do the effects of injectable treatments last?

The effects of Botox treatments can last up to four months as they are not permanent. It would be best to get regular and consistent Botox injections to preserve the results. However, derma fillers can last up to six to eighteen months.

5. Is Botox a safe and effective treatment?

The safety of the Botox treatment has been evaluated in the Allergan-sponsored clinical trials and over 417 peer-reviewed articles in scientific and medical journals. It is used worldwide in approximately 78 countries by people from different age groups and has shown no significant side effects that would render it unfit. Botox is an effective treatment but lasts only for three to six months. For lasting results, it is necessary to get Botox injections every three months.
